Dear Honda owner,

Honda is committed to on-going product testing and as a result has released a product upgrade for the VT750C.

During product testing, it was discovered that in certain motorcycles the insulation on the positive battery cable can wear through due to normal vibrations. This can cause a short circuit and may disable the motorcycle. In extreme cases you may notice smoke as the battery box can heat up. As a result a redesigned positive battery cable has been developed.

As your motorcycle with VIN number {VIN} has not already had this modification carried out please contact your nearest Honda Dealer and arrange to have your machine booked in for repair. The dealer will replace your positive battery cable with the new modified part free of charge. Please arrange to get this defect rectified as soon as possible as the possibility of fire cannot be ruled out.

If you are no longer the owner of a VT750, please take the time to contact us on the below number and advise us of the details (or lack thereof) of the person to whom you disposed of the unit. This will allow us to update our records.

We trust that this update campaign will not adversely affect your opinion of our product or your riding pleasure. Should you require any additional information on this matter, please feel free to contact us on **free phone** 0508 466 326.

Yours sincerely,

A handwritten signature in black ink, appearing to read "Bruce Nielsen".

Bruce Nielsen
National Technical Manager
